This is a 3D CAD model of a mechanical assembly. The assembly consists of several components: a long horizontal bar at the top, a vertical support structure below it, and a curved base. A small, light-colored cylindrical component, identified as an adjustment nut, is located on the horizontal bar. A callout box with a pointer indicates its position. The background is a light blue gradient.

A 3D CAD model of a ceiling tray assembly. The central component is a circular, silver-colored tray with a central circular opening and a ring of 24 small holes around its perimeter. Two vertical screws are shown passing through the tray and into a radial support beam. The tray is mounted on a larger, white, circular base. The background shows a network of white and grey structural beams.
